

Back button rule #1

The back button always brings users back to the previous page/screen where they came from.

When users tap on a back button, it will take them back to the previous page/screen. The user goes through the Map Classroom > Activity subjects> Single activity in the case shown above. The Back button on each screen will bring the user back to its previous and one-level upper page/screen.

Back button rule #2

If the previous page is an equal or lower level to the current page, bring the users back to its upper-level page/screen where they came from.

If the previous page the users visited is an equal or lower level to the user's current page, the back button won't bring users back to where they were but takes them back to its one-level upper screen/page. For example, in the above case, the user visits the More Puzzle page from a ticket machine. By tapping the back button, the user won't return to the activity he played or the zoo games category page but directly back to its upper-level screen, which is the Zoo main screen.
